

1 Advection

1.1 advect1-t

- *advect1-t.i*
- 1D generated mesh with libmesh
- Uses DG Kernels
- InflowBC and OutflowBC
- Transient problem

Figure 1 shows the results. Advects BC. It seems like the variable has to be a CONSTANT MONOMIAL.

$$\frac{\partial}{\partial t}\rho + v \frac{\partial}{\partial x}\rho = 0 \quad (1)$$

Figure 1: Advected density.

1.2 periodic_bc2

- *moose/examples/ex04-bcs/periodic_bc2.i*
- 1D generated mesh with libmesh
- Periodic BCs
- Transient problem

In *advect1-t-bc.i* I tried to add periodicBCs to the previous problem and it does not work. Here I tried to isolate the problem. Figure 2 shows the results. It does not work if the variable is a CONSTANT MONOMIAL. It works if the variable is FIRST order (either MONOMIAL or LAGRANGE).

Figure 2: Periodic BCs.

1.3 advect2-t

- *advect2-t.i*
- 1D generated mesh with libmesh
- Uses DG Kernels
- TemperatureInflowBC and TemperatureOutflowBC
- Transient problem

Very similar to *advect1-t.i*. Adds volumetric source. Figure 3 shows the results. It is correct.
 $\rho(L, t \rightarrow \infty) - \rho(0, t) = q/v * L = 200$

$$\frac{\partial}{\partial t}\rho + v \frac{\partial}{\partial x}\rho = \dot{q} \quad (2)$$

- IC: $\rho(x, 0) = 100 + 10\sin(\frac{\pi}{L}x)$
- BC: $\rho(0, t) = 100$
- $v = 0.5$
- $L = 100$
- $q = 1$

1.4 advect2-ss

- *advect2-ss.i*
- 1D generated mesh with libmesh

Figure 3: Advected density with volumetric source.

- Uses DG Kernels
- Inflow and OutflowBC
- Steady problem

Same as *advec2-t* but steady state. Figure 4 shows the results. It is correct. $\rho(L) - \rho(0) = q/v * L = 200$

$$v \frac{\partial}{\partial x} \rho = \dot{q} \quad (3)$$

- BC: $\rho(0, t) = 100$
- $v = 0.5$
- $L = 100$
- $q = 1$

Figure 4: Steady state solution.

1.5 advect3-t

- *advect3-t.i*
- 1D generated mesh with libmesh
- Uses DG Kernels
- TemperatureInflowBC and TemperatureOutflowBC
- Transient problem

Very similar to *advect1-t.i*. Solves for the temperature advection equation. Advects BC. Figure 5 shows the results.

$$\rho c_p \frac{\partial}{\partial t} T + \rho c_p v \frac{\partial}{\partial x} T = 0 \quad (4)$$

- BC: $T(0, t) = 930$
- IC: $T(x, 0) = 930$
- $\rho = 1e-2$
- $c_p = 2e3$
- $v = 0.5$
- $L = 100$

Figure 5: Advects BC.

1.6 advect4-t

- *advect4-t.i*
- 1D generated mesh with libmesh
- Uses DG Kernels
- TemperatureInflowBC and TemperatureOutflowBC
- Transient problem

Similar to *advec4-t.i* Adds a point source and solves for temperature. Figure 6 shows the results. It is correct. $T(L) - T(0) = q/(\rho c_p v) * L = 10$

$$\rho c_p \frac{\partial}{\partial t} T + \rho c_p v \frac{\partial}{\partial x} T = \dot{q} \quad (5)$$

- BC: $T(0, t) = 930$
- IC: $T(x, 0) = 930$
- $\rho = 1e-2$
- $c_p = 2e3$
- $v = 0.5$
- $L = 100$
- $q = 1$

Figure 6: t=250.

1.7 advec5-t

- *advec5-t.i*
- pseudo-1D: GeneratedMesh
- Uses DG Kernels
- TemperatureInflowBC and TemperatureOutflowBC
- Transient problem

Similar to *advec4-t.i* but has a q'' on the wall. Figure 7 shows the results.

$$\rho c_p \frac{\partial}{\partial t} T + \rho c_p v \frac{\partial}{\partial x} T = 0 \quad (6)$$

This is not the real equation. When using the Galerkin method, a new term appears due to the neumann BC.

- IC: $T(x, y, 0) = 930$

- BC: $T(x, 0, t) = 930$
- BC: $q''(0, y, t) = 10\sin(\pi/Ly)$
- $\rho = 1e-2$
- $c_p = 2e3$
- $v = 0.5$
- $L = 100$
- $\Delta_x = 2$

$$T(L) - T(0) = \frac{1}{\rho c_p v} \frac{1}{\Delta_x \Delta_z} \int_0^L q'' dy \Delta_z = \frac{1}{10} \frac{1}{2} \frac{10 \times 2 \times L}{\pi} \quad (7)$$

Figure 7: Advects temperature while wall is been heated.

1.8 advect5-ss

- *advect5-ss.i*
- pseudo-1D: GeneratedMesh
- Uses DG Kernels
- TemperatureInflowBC and TemperatureOutflowBC
- Steady state problem

Steady state version of *advect5-t.i*. Figure 8 shows the results.

$$\rho c_p v \frac{\partial}{\partial x} T = 0 \quad (8)$$

This is not the real equation. When using the Galerkin method, a new term appears due to the neumann BC.

- BC: $T(x, 0) = 930$
- BC: $q''(0, y) = 10\sin(\pi/Ly)$

- $\rho = 1e-2$
- $c_p = 2e3$
- $v = 0.5$
- $L = 100$
- $\Delta_x = 2$

$$T(L) = T(0) + \frac{1}{\rho c_p v} \frac{1}{\Delta_x \Delta_z} \int_0^L q'' dy \Delta_z = T(0) + \frac{1}{10} \frac{1}{2} \frac{10 \times 2 \times L}{\pi} = 961 \quad (9)$$

Figure 8: Adveacts temperature while wall is been heated.

1.9 advect6-t

- *advect6-t.i*
- Mesh: 2D-coolant.msh
- Uses DG Kernels
- TemperatureInflowBC and TemperatureOutflowBC
- Transient problem

Like *advect5-t.i* but uses the values of the PMR600 (or close values). Figure 9 shows the results. Constanst came from [2] and [1].

$$\rho c_p \frac{\partial}{\partial t} T + \rho c_p v \frac{\partial}{\partial x} T = 0 \quad (10)$$

This is not the real equation. When using the Galerkin method, a new term appears due to the neumann BC.

- BC: $T(x, 0) = 490^\circ C$
- BC: $q''(0, y) = 22.24 \sin(\pi/Ly)$
- $\rho(7MPa, 490^\circ C) = 4.368 kg/m^3 = 4.368e-6 kg/cm^3$

- $c_p(7MPa, 490^\circ C) = 5.188J/g/K = 5.188e3J/kg/K$
- $v = 26.57m/s = 2657cm/s$
- $L = 793cm$
- $R = 0.794cm$

$$T(L) - T(0) = \frac{1}{\rho c_p v} \frac{1}{\pi R^2} \int_0^L q'' dy 2\pi R = \frac{1}{60.2} \frac{2}{R} \frac{20 \times 2 \times L}{\pi} \quad (11)$$

Figure 9: Adveects temperature while wall is been heated.

1.10 advec6-ss

- *advec6-ss.i*
- Mesh: 2D-coolant.msh
- Uses DG Kernels
- TemperatureInflowBC and TemperatureOutflowBC
- Steady-state problem

Like *advec6-t.i* but steady state. Figure 10 shows the results.

$$\rho c_p v \frac{\partial}{\partial x} T = 0 \quad (12)$$

This is not the real equation. When using the Galerkin method, a new term appears due to the neumann BC.

1.11 diff1-ss

- *diff1-ss.i*
- GeneratedMesh
- Uses DG Kernels
- DGFunctionDiffusionDirichletBC

Figure 10: Advects temperature while wall is been heated.

- Steady-state problem

Figure 11 shows the results.

$$k\nabla^2 T + q = 0 \quad (13)$$

- BC: $T(2, y) = 490^\circ C$
- $k = 1$
- $q = 1$
- $\Delta_x = 2$

Figure 11: Diffusion using DG Kernels.

1.12 cg-advec1-ss

- *cg-advec1-ss.i*
- 2D GeneratedMesh
- Uses CG Kernels
- Steady-state problem

Figure 12 and 13 shows the results.

$$k\nabla^2 T + q = 0 \quad (14)$$

- BC: $T(x, 0) = 930^\circ C$
- $q = 10\sin(\pi/Ly)$
- $L = 100$
- $\Delta_x = 2$
- $\rho = 1e-2$
- $c_p = 2e3$
- $k = 1$

Figure 12: Steady state advection diffusion.

Figure 13: Steady state advection diffusion on $(0,50,0)-(2,50,0)$.

1.13 cg-advec2-ss

- *cg-advec2-ss.i*
- mesh: 2D-coolantB.msh
- Uses CG Kernels
- Steady-state problem

Figure 14 and 15 shows the results.

$$\rho c_p v \frac{\partial}{\partial x} T = 0 \quad (15)$$

This is not the real equation. When using the Galerkin method, a new term appears due to the neumann BC.

- BC: $T(x, 0) = 490^\circ C$
- $q''(0, y) = 22.24 \sin(\pi/Ly) W/cm^2$
- $L = 793cm$
- $R_C = 0.794cm$
- $\rho(7MPa, 490^\circ C) = 4.368kg/m^3 = 4.368e-6kg/cm^3$
- $c_p(7MPa, 490^\circ C) = 5.188J/g/K = 5.188e3J/kg/K$
- $v = 26.57m/s = 2657cm/s$
- $k = 10W/m/K = 1e3W/cm/K$

Figure 14: Steady state advection diffusion.

Figure 15: Steady state advection diffusion on (0,400,0)-(0.794,400,0).

1.14 cg-advect3-ss

- *cg-advect3-ss.i*
- mesh: 3D-coolant.msh
- Uses CG Kernels
- Steady-state problem

Figure 16 shows the results.

$$\rho c_p v \frac{\partial}{\partial x} T = 0 \quad (16)$$

This is not the real equation. When using the Galerkin method, a new term appears due to the neumann BC.

- BC: $T(r, 0) = 490^\circ C$
- $q''(R, z) = 22.24 \sin(\pi/Lz) W/cm^2$
- $L = 793cm$
- $R_C = 0.794cm$
- $\rho(7MPa, 490^\circ C) = 4.368kg/m^3 = 4.368e-6kg/cm^3$
- $c_p(7MPa, 490^\circ C) = 5.188J/g/K = 5.188e3J/kg/K$
- $v = 26.57m/s = 2657cm/s$
- $k = 10W/m/K = 1e3W/cm/K$

1.15 cg-advect4-ss

- *cg-advect4-ss.i*
- mesh: 3D-cell.msh
- Uses CG Kernels

Figure 16: Steady state advection diffusion on (0,0,0)-(0,0,793).

- Steady-state problem

Figure 18 displays the geometry of the unit cell. Figure 17 shows the thermal conductivities of the fuel and moderator results. Figure 19 and 20 show the results.

$$\rho c_p v \frac{\partial}{\partial x} T = 0 \quad (17)$$

This is not the real equation. When using the Galerkin method, a new term appears due to the neumann BC.

- BC: $T(r, 0) = 490^\circ C$
- $q''(R, z) = 43.8 \sin(\pi/Lz) W/cm^3$
- $L = 793 cm$
- $R_C = 0.794 cm$
- $R_F = 0.635 cm$
- $\rho_C(7 MPa, 490^\circ C) = 4.368 kg/m^3 = 4.368e-6 kg/cm^3$
- $c_{p,C}(7 MPa, 490^\circ C) = 5.188 J/g/K = 5.188e3 J/kg/K$
- $v = 26.57 m/s = 2657 cm/s$
- $k_C = 10 W/m/K = 1e3 W/cm/K$
- $k_F(T)$
- $k_M(T)$

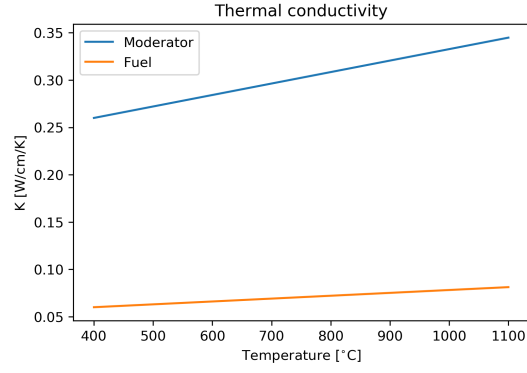

Figure 17: Thermal conductivity of the fuel and the moderator.

Figure 18: Unit cell geometry.

(a) Coolant centerline: $(0,0,0)-(0,793,0)$. (b) Fuel centerline: $(1.88,0,0)-(1.88,793,0)$.

Figure 19: Steady state advection diffusion.

Figure 20: Across coolant, moderator, and fuel: $(0,0,400)-(1.88,0,400)$.
